

The versatile solution for your access control application

Time recording in companies, ticket control in museums, access control to staff areas and lounges in train stations and airports. Every access application has its specific requirements – and mFlow offers versatile solutions for each. This is due to the modular design: mFlow is based on the Momentum® Serie, which allows readers, biometric scanners and additional displays to be seamlessly integrated into the pedestrian gates. With barrier elements of different heights or widths, barrier-free or particularly secure passageways are enabled. mFlow also gives you the choice of design: The timeless shape with the glass elements

opens up the view into the building, and with lighting elements on the floor and on the frame edges you can highlight the passage as a central element. With numerous special colours, you can adapt mFlow individually to the architecture of your building.

Common to all mFlow is the intuitive, comprehensively monitored passage process, the simple replacement of the central components and the drive and control technology from Magnetic that has been tried and tested more than 200,000 times.

Rely on mFlow and get flow into your application!

Numerous applications

Companies, cultural institutions, train stations and airports: mFlow offers a fast and reliable access control solution for all these applications – flexibly adapted to your individual requirements.

Comprehensive customisation

mFlow has a modular design and can be flexibly adapted to the requirements on site – in terms of design and biometrics as well as integration into the building and its digital infrastructure.

Simple integration

mFlow provides the hardware for your digital security architecture. The pedestrian gates can be equipped with all common reading devices and can be easily integrated into existing security and data processing systems through a variety of interfaces.

Innovative drive technology

The drive and control units are Magnetic's core technology. With its low-energy approach, the Magnetic Safety Drive System MSDS® combines high efficiency and economical operation with maximum personal safety.

mFlow

Pedestrian passageway with wing gates

- › High people throughput speeds up access processes considerably
- › Seamless integration into all building and security infrastructures
- › Easy maintenance and retrofitting due to modular design
- › Configuration according to individual requirements
- › Maximum passenger safety due to Magnetic Safety Drive System MSDS® with low-energy drive
- › Designed for 10 000 000 opening and closing cycles

Technical data	mFlow
Application	Indoor
Passage width	Standard: 600 mm Wide lane: 900 mm (more on request)
Height of barrier elements	Standard: 1000 mm (more on request)
Opening/closing time	0.6–1.0 s ¹
Flow ratings (number of persons per minute)	40 PAX/min ²
Drive technology	MHTM™
Control system	MGC plus
Parameter setting	Via API or web-UI
Power consumption	Maximum 250 W ³
Housing material	Aluminium and sheet steel powder-coated Stainless steel (on request)
Enclosure rating	IP32
Housing dimensions (L x H x W)	1800 x 1000 x 160 mm
Weight	A unit: approx. 110 kg B unit: approx. 140 kg C unit: approx. 160 kg
Emergency release	Through emergency button
Temperature range	0 to +40 °C

¹ Depending on barrier element dimension; opening and closing times limited by low-energy drive and technical specifications for maximum impact forces.

² Depending on reader, lock setting, person behaviour.

³ Power consumption refers exclusively to Magnetic components.

Options

Easy integration of RFID, document and barcode readers and other common systems for checking access authorisation

Biometric devices

Key switch (different functional assignments possible)

Buzzer for acoustic signalling

Failure locking for power failures

Guidance lights (RGB)

Frame edge and floor illumination

Customised glass panels (tinted/clear)

Potential applications

Standard colours (special colours on request)

Pure white, smooth glossy
(RAL 9010)

Jet black, fine structure matt
(RAL 9005)

mFlow (2-line configuration) – front view

mFlow (2-line configuration) – side view

mFlow (2-line configuration) – top view

mFlow with frame edge and floor illumination

Access to Progress

Magnetic stands for high-quality vehicle barriers and pedestrian gates. With their thought-out design, innovative drive technology and extreme durability our products are well ahead of the competition. In addition, thanks to the experience in numerous market segments, our customers are offered precisely the access control solutions they require. We look forward to talking to you!

FAAC TECHNOLOGIES is one of the top international players in access automation, parking and access control business in both the residential and industrial sectors. With a widespread presence on a global scale, we are always close to you and offer

you solutions for your individual market segment. We are proud to present Magnetic as a specialist for groundbreaking vehicle barriers and pedestrian gates in our group.
